

A $Y_A = 21$
 $T_A = 1$

B $Y_B = 11$
 $T_B = 0$

C $Y_C = 9$
 $T_C = 0$

D $Y_D = 5$
 $T_D = 1$

I don't know about the individual causal effects. BUT I can help you TEST your ideas / HYPOTHESES about them.

① Idea/ H_0 : $Y_i(1) = Y_i(0)$

② H_0 implies $Y_i = Y_i(0)$

③ H_0 and Randomization imply 6 equally likely $t_0(T, Y)$ values.

i	T	Y	$Y(T=1)$	$Y(T=0)$	Effect (τ)
A	1	21	21	21	$21 - ? = \tau_A$
B	0	11	?	11	$? - 11 = \tau_B$
C	0	9	?	9	$? - 9 = \tau_C$
D	1	5	5	5	$5 - ? = \tau_D$

In this experiment, "No effects" means
